

PRACTICAL

Salesforce Apex — Fibonacci Series

Cloud Computing Lab | LP-II

AIM

To create an application in Salesforce.com using Apex Programming Language to implement Fibonacci Series Calculation.

STEPS TO PERFORM

Step 1	Login to Salesforce: Go to https://login.salesforce.com and login with credentials.
Step 2	Open Developer Console: Click Gear icon (top right) → Select 'Developer Console'.
Step 3	Create New Apex Class: Click File → New → Apex Class → Enter class name 'FibonacciSeries' → Click OK.
Step 4	Write Class Code: Write the Apex class code with fibonacci method in the editor (see Class Code below).
Step 5	Save the Class: Press Ctrl+S to save the Apex class.
Step 6	Open Anonymous Window: Click Debug → Open Execute Anonymous Window.
Step 7	Write Object & Call Code: Create object and call the fibonacci method (see Execute Code below).
Step 8	Execute & View Output: Click 'Execute' → Open Logs tab → Click latest log → Check DEBUG output.

APEX CLASS CODE (File -> New -> Apex Class)

```
public class FibonacciSeries {  
  
    // Method to generate Fibonacci series  
    public void fibonacci(Integer n) {  
        Integer a = 0;  
        Integer b = 1;  
        Integer c;  
        String series = '';  
  
        for(Integer i = 1; i <= n; i++) {  
            series = series + a + ' ';  
            c = a + b;  
            a = b;  
            b = c;  
        }  
  
        System.debug('Fibonacci Series: ' + series);  
    }  
}
```

EXECUTE ANONYMOUS CODE (Debug -> Open Execute Anonymous Window)

```
// Create object of FibonacciSeries class  
FibonacciSeries obj = new FibonacciSeries();  
  
// Call fibonacci method using object  
// Passing 10 to generate first 10 Fibonacci numbers  
obj.fibonacci(10);
```

OUTPUT

DEBUG | Fibonacci Series: 0 1 1 2 3 5 8 13 21 34

CONCLUSION

Successfully created an Apex Class 'FibonacciSeries' in Salesforce Developer Console, created an object of the class, called the fibonacci method and verified the output. First 10 Fibonacci numbers: 0 1 1 2 3 5 8 13 21 34.
